

EDUCATION

Morehouse College: Grad. Dec. 2025 B.A. Computer Science, Math

Awards: Creativity in Robotics Award, 1st Place at Battle Of The Brains

AFFILIATIONS & SKILLS

Affiliations: CodeHouse, Google Tech Exchange Scholar , National Action Network, Morehouse Tech Collective

Software: C/C++, Python, Java, C#, Javascript, HTML/CSS, React TS, SQL/KQL, Azure, Flask, Git/Github

PROFESSIONAL EXPERIENCE

Microsoft | Data Engineering Intern | Seattle, WA | May 2025 -August 2025

- Worked on a new tool that allows users to query relational databases with natural language by leveraging AI
- Improved the LLM context used for Retrieval Augmented Generation to make query language conversion more accurate by evaluating AI's ability to comprehend the data
- Reduced syntax errors for AI query language converter by implementing self correcting AI
- Built a pipeline that extracts context, generates feedback and improvements, and visualizes the said feedback using Cosmos DB, Azure Blob Storage, and Azure Data explorer, Azure Functions, Azure Open AI, and Power BI

Best Buy | *Software Engineer Intern* | Atlanta, GA (Virtual) | June 2024 - August 2024

- Created message log functions for customer service software using Javascript
- Worked closely with QA to deploy extensive functional testing on a Login page
- Optimized Rest API calls for client information organization using hashing

Morehouse Academic Center | *Data Structures Tutor* | Atlanta, GA | October 2023 - Present  Tutoring Guide

- Built classes and unit tests for every data structure for students to apply their knowledge to real code and practical algorithms
- Authored Computer Science tutoring guide deploying advanced education techniques to improve the pass rates by over 100%
- Teach students about concepts regarding Data Structures (Hashing, B-Tree's, Priority Queues, etc)

Morehouse Academic Center | Deep Learning Researcher | Atlanta, GA | June 2024 - August 2024

- Created website that provides resources and project updates for students new Machine Learning course at Morehouse College
- Programmed DNN, CNN, and activation functions during a course in Machine Learning
- Debugged, optimized, and tested AI model for self driving car and object detection using NVIDIA's Jetson Inference

PROJECTS

Context Engineer | *Fullstack Developer* | Microsoft | July 2025 - August 2025

- Determined the effectiveness of context used for an AI model by comparing user questions and expected answers
- Called an Azure Open AI GPT 4o endpoint to determine the LLM result of a question with your context
- Extracted the embeddings of the user and AI data using Python's sentence transformer model library
- Applied the cos similarity on the question, context, AI answer and expected answer to determine context influence and accuracy

Gurt Uses Real Teachings | *Backend Developer* | Microsoft Intern Hackathon | July 2025

- Developed education AI platform with the goal of maintaining the integrity of student learning using flask
- Built data pipeline that offers a student AI feedback on full semester performance by analyzing all of their assignments stored as zip files using Azure Blob Storage and Cosmos DB
- Leveraged a GPT 4o model to explain school topics using analogies for students to better grasp concepts

StreamSense | *Frontend Developer* | Battle Of The Brains | March 2025

- Led a team that created a web service to generate advertisements based on TV and movie streaming sites.
- Created a response UI for our product using ReactTS & Material UI
- Wrote API call to flask backend to receive images from FLUX. 1 diffusion model for image generation
- Gave a live presentation to corporate sponsors like Amazon and Dell, communicating the environmental and business benefits of NPU's and the removal of user data in AD the model
